SYSTEMS

Thursday/Friday, 14-15 March 2019

Melbourne, Australia

Venue - Melbourne Cricket Ground

Symposium Summary

The Clinical Interventional Oncology Symposium is a dedicated one and a half day workshop on all aspects of clinical oncology relevant to interventional radiologists (IRs). Interventional Oncology (IO) is a dynamic and ever-expanding profession, and practising IRs must be up to date across a wide range of clinical and technical skills. This dedicated session for IRs will highlight the importance of high-quality clinical practice in IO, and how to take interventions "mainstream".

Interventional radiologists of any age are encouraged to attend and learn more about these important concepts in clinical oncology for the modern IR. This course is also highly recommended to registrars who are those interested in a future career in interventional radiology.

Guest Speakers

- Dr Costi Sofocleous, Interventional Radiologist, Memorial Sloan Kettering Cancer Centre, New York
- Prof Andy Adam, Interventional Radiologist, Guys and St Thomas' Hospital, London
- Prof Liz Kenny, Radiation Oncologist, Royal Brisbane and Women's Hospital, Brisbane
