Collaborative Care Dashboard

## Solving a very personal problem

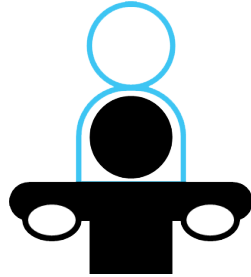

loop+ was started by two sisters Kath Hamilton and Clare Conroy, solving a very personal problem. Clare's son was born with a tumour pressing on his spine that left him paralysed. Like many wheelchair users, Evander has no feeling below his waist. At just 7 years of age, Evander already has scoliosis, been hospitalised many times and has recurring pressure sores.

# No visibility of behaviours in everyday life

Wheelchair User  
doesn't understand  
what going on with  
body. Cant articulate  
to care team

Episodic care with  
snapshots of  
information

Don't know if doing  
the right thing, or if  
having any impact

# Everyday Visibility

Continuously measuring

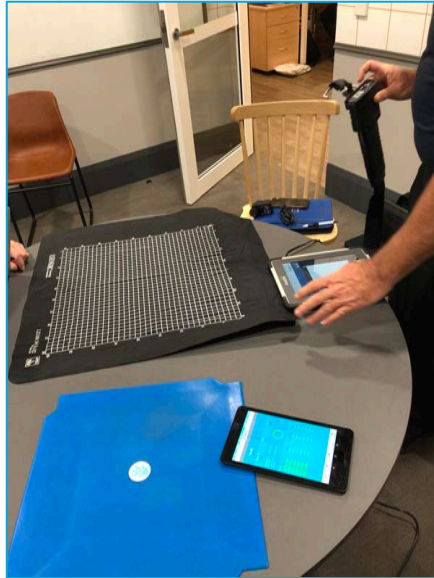

- ✓ position
- ✓ pressure
- ✓ humidity
- ✓ movement

# Continuous monitoring compliments existing devices

Loop+ is a compliment to many types of assistive devices, accessories and measurement tools

Xsensor pressure mapping for seating assessments In clinic. loop+ compliments measuring continuously in real world

loop+ measures the wheelchair user after seating intervention such as support cushions

Product in action, demonstrated by our general manager, Chris Nicholls
